Summary

QA Automation Engineer with 1.5 years of hands-on experience testing a production fintech platform (AI-powered private-markets valuation at 73 Strings). Automated **500+** UI regression test cases in Selenium WebDriver (C#), contributed to the suite's modernization to Playwright with TypeScript, and recently expanded into REST API testing and Snowflake data validation. Strong fundamentals in manual testing, defect lifecycle management (JIRA), and Agile delivery; converted from intern to full-time on performance.

Technical Skills

Test Automation: Selenium WebDriver (C#), Playwright (TypeScript), NUnit, Page Object Model, AI-assisted automation (MCP)
API & Data Testing: REST API Testing (Postman), Snowflake (pipeline/data validation), SQL
Testing Practices: Manual Testing, Test Case Design, Regression & Sanity Testing, Defect Reporting, SDLC/STLC, Agile/Scrum
Languages: C#, TypeScript, Java (basic), C++ (basic)
Tools & Platforms: JIRA, Git, Bitbucket, HTML, CSS

Experience

73 Strings — Bengaluru, India
QA Automation Engineer — *May 2026 – Aug 2026*

- Expanded the modernized automation suite in Playwright with TypeScript, writing and migrating **400+** test cases spanning new feature flows and high-value regression scenarios from the legacy Selenium suite
- Broadened coverage into REST API testing with Postman, validating **15+** endpoints alongside UI flows to catch integration defects earlier in the cycle
- Performed data-platform QA on Snowflake, validating **10+** data processes across environments to verify financial data pipeline outputs
- Ran the full automated regression suite against every production deployment (**5+** releases), analyzing failed runs to separate genuine defects from script issues
- Reported and tracked **100+** defects in JIRA across the tenure, collaborating with developers across Agile sprint cycles for timely resolution

GoKloud Software Solutions (deputed at 73 Strings) — Bengaluru, India
QA Automation Intern — *Apr 2025 – May 2026*

- Automated **500+** UI regression test cases for a production fintech web application using Selenium WebDriver with C#, significantly reducing manual testing effort
- Developed a bulk entity-onboarding automation script used during migration and in regular operations, processing **2,000+** entities in a single batch and cutting QA validation time for onboarding workflows by **60%**
- Built an automated value-comparison script to validate data parity across platforms during a migration, replacing manual side-by-side checks and cutting manual effort by **70%** with faster, more accurate validation
- Built reusable, Page Object Model-based scripts for core user workflows — login flows, form validations, navigation, and regression scenarios
- Maintained and updated test cases against evolving business requirements and new feature releases
- Adopted Playwright with TypeScript as the team modernized its suite, writing and executing scripts for new feature flows
- Earned conversion to a full-time role after a two-round technical and behavioral evaluation

Projects

UI Test Automation Framework | *Selenium WebDriver, C#, NUnit*

- Designed a Page Object Model-structured framework with reusable validation scripts for forms, buttons, navigation, and user actions — automating **500+** repetitive regression cases with long-term maintainability in mind

UI Automation Suite Modernization | *Playwright, TypeScript*

- Automated **400+** test cases through modern automation scripts, achieving faster and more stable execution than the legacy Selenium suite while validating application behaviour across core user flows

Education

Chitkara University — Punjab, India
B.E. — Computer Science Engineering (CGPA: 8.80) — *2022 – 2026*

Sahara Comprehensive School — Haryana, India
Class XII (CBSE): 91.6% | Class X (CBSE): 94.8% — *2020 – 2022*
